

Survey App

Surveys are a valuable part of any developers toolbox. They are useful for getting feedback from your users on a variety of topics including application satisfaction, requirements, upcoming needs, issues, priorities, and just plain aggravations to name a few.

The Survey app provides the ability to define a survey, allow users to respond within a predefined time-frame, and tabulate and present results.

Users of this app are divided into two distinct roles, each having different requirements:

- *Survey Coordinators* define and conduct surveys. This is an administrative function not available to normal users.
- *Survey Respondents* Complete surveys and view results. They have no administrative privileges within the app.

Defining a Survey

- A survey contains one or more questions. The question can have one or more answer.
- A survey should have a title.
- Some questions can be marked as required

Conducting a Survey

- Survey Coordinator can open a survey from previously defined surveys.
- Survey Coordinators can close a survey from open surveys.
- Survey Respondent can view open surveys
- Survey Respondent can respond to open surveys

Viewing Survey Results

- Survey Coordinators can view all responses to his surveys
- Survey Respondents can view his responses.

Other features

- Authentication system
